

Data Dictionary - PIMSB

- **Tables:**

Users Table: this table is crucial for managing user accounts, facilitating user logins, personalizing the user experience, and maintaining secure and up-to-date user information.

UserID (Primary Key): Integer. A unique identifier was assigned to each user for identification.

Username: String (100). A unique name chosen by the user for login purposes.

Email: String (100). The user's email address, used for communication and account recovery.

Password: String (100). A securely hashed representation of the user's password, ensuring that actual passwords are not stored in the database for security reasons.

FirstName: String (100). The user's first name, allowing for personalization of the user experience.

LastName: String (100). The user's last name, further personalizing the user experience.

DateOfBirth: Date. The user's date of birth, which can be used for age verification and personalized fitness advice.

CreatedAt: TimeStamp. The timestamp of when the user account was created, useful for tracking account age and for administrative purposes.

UpdatedAt: TimeStamp. The timestamp of the last update made to the user's account, helping in maintaining the accuracy and relevance of the user information.

Fitness Activities Table: this table is designed to track and store user fitness activities. Each record represents a specific fitness activity performed by a user.

ActivityID (Primary Key): Integer. A unique identifier for each activity.

UserID (Foreign Key): Integer. Links to the Users table to associate the activity with a user.

ActivityType: String (100). The type of fitness activity (e.g., running, cycling, swimming).

Duration: Integer. Duration of the activity.

Distance: Float. Distance covered during the activity (if applicable).

CaloriesBurned: Integer. Estimated calories burned during the activity.

ActivityDate: Date. The date and time when the activity took place.

CreatedAt: TimeStamp. The date and time the activity record was created.

Nutrition Table: this table allows users to track their daily intake of food.

NutritionID (Primary Key): Integer. A unique identifier for each nutrition entry.

UserID (Foreign Key): Integer. Links to the Users table, associating the nutrition entry with a specific user.

Date: Date. The date when the food was consumed.

MealType: String (100). Categorizes the entry by meal type (e.g., Breakfast, Lunch, Dinner, Snack).

FoodItem: String (100). The name of the food item consumed.

Calories: Integer. The calorie content of the consumed food item.

Proteins (grams): Integer. The protein content of the food item.

Carbohydrates (grams): Integer. The carbohydrate content of the food item.

Fats (grams): Integer. The fat content of the food item.

Quantity: Integer. The quantity of the food item consumed.

CreatedAt: Timestamp. The date and time the nutrition record was created.

- **Relationships:**

Users to FitnessActivities: One-to-Many (One user can have multiple fitness activities).

Users to Nutrition: One-to-Many (One user can have multiple nutrition records).
